Subject FW: R. Lavin Cleanup Status

Brad - As we discussed last week, I have attached the data from the wipe tests that USEPA requested and an explanatory letter from K-Plus. While there are no controlling standards for this test in this context, given the power washing, the results are consistent with the first two tanks and concrete basin as being "clean". We have a buyer for the South tank (which had the lowest levels) and would like to complete that sale as soon as possible. The buyer will dismantle and remove the South tank which also should prevent any future accumulation of significant amounts of storm water which could occur if the South tank remains in place.

Because any delay could cost us this buyer, we would appreciate hearing from you that USEPA has no objection to the planned disposition of the South tank.

Thanks, Ray Reott
